

– General Purpose Document –

NeuroAudit was founded in 2019 and has developed an innovative neurotechnology called psychoacoustics neuro stimulus, which is used to treat brain disorders via blood conduction.

The main application of NeuroAudit technology is in the treatment of Alzheimer's disease, a neurodegenerative condition that causes memory loss, cognitive impairment, and behavioral changes. This noninvasive cognitive boost patch delivers a pure signal through the skin to the brain using a new technique called blood conduction. NeuroAudit aims to improve the lives of millions of people suffering from brain disorders.

NeuroAudit offers a novel and effective therapy that can slow down or even reverse the cognitive decline caused by Alzheimer's disease by modulating specific brain regions and networks.

NeuroAudit's technology is tailored to each individual's brain activity, making it a personalized treatment for brain disorders and cognitive enhancement. It has the potential to revolutionize healthcare not only for those with neurological conditions but also for people suffering from chronic pain or depression.

In 2019, NeuroAudit was recognized as one of the top 27 Israeli neuroscience companies, and in 2020, it was recognized as "The Most Innovative Neurotech Company in The Middle East."

Our vision

NeuroAudit continues to make strides in developing new applications for their groundbreaking technology that has the potential to revolutionize healthcare for current and future generations.

Sincerely,
NeuroAudit Team
