

*Cognitive boost technology when you need it*

---

## **– General Purpose Document –**

In 2016, NeuroAudit opened its doors to revolutionize the healthcare industry with the introduction of innovative neurotechnology called psychoacoustics neuro stimulus steered for treatment via blood conduct.

This technology has the potential to transform how certain medical treatments are administered under conditions treatment of brain disorders and for cognitive improvement of brain disorders such as:

- Alzheimer's diseases
- Cognitive disorders

This technology has the potential to revolutionize the way medical professionals treat patients with neurological disorders and help improve a patient's neurological function.

A small noninvasive stimulating patch, NeuroAudit showed improvements in certain cognitive operations and was able to send a pure tone to an utterly deaf guy via the blood using an ultrasonic algorithm.

NeuroAudit's technology is an example of how cutting-edge advancements in neuroscience can have an impact on our everyday lives and bring about positive change for those living with neurological conditions; and has potential applications in other areas, such as helping people who suffer from chronic pain or depression.

### **Our vision**

NeuroAudit continues to make strides in developing new applications for their groundbreaking technology that has the potential to revolutionize healthcare for current and future generations.

Sincerely,  
NeuroAudit Team
